

Budding issue

Issue: Meatless Mondays

Issue:

Growing meat to eat contributes to climate change more than every car, train, truck and plane combined.

Facts:

Meat farming is the world's greatest contributor to deforestation and water shortages on the globe.

So What?

Making a simple change to not eating meat 1 day a week would dramatically reduce the amount of damage we are doing to the environment.

Activities:

- Don't eat meat on Mondays - it's that simple.
- Think how you can encourage others to join you on this journey.
- Make a poster in the school hall about making different choices when choosing a meal.

Other Activities:

- Do some research into the impact meat eating has on the climate.
- Look at your recent meals, how many of them included meat?
- Create a persuasive argument for trying vegetarianism.
